

 You

read the readme.md and make me a sign up form with `<One />` component from a file

 Readme.md Copilot

✓ Reading the file: Readme.md

Sure, I can help you with that. Based on the content of the `Readme.md` file, the `<One />` component is a part of the `react-declarative` library and it represents a form with various fields. Here's an example of how you can create a sign-up form using the `<One />` component:

```
import React from 'react';
import { One, FieldType } from 'react-declarative';

const SignUpForm = () => {
  const fields = [
    {
      type: FieldType.Text,
      title: 'Username',
      name: 'username',
      placeholder: 'Enter your username',
    },
    {
      type: FieldType.Text,
      title: 'Email',
      name: 'email',
      placeholder: 'Enter your email',
    },
    {
      type: FieldType.Password,
      title: 'Password',
      name: 'password',
      placeholder: 'Enter your password',
    },
    {
      type: FieldType.Password,
      title: 'Confirm Password',
      name: 'confirmPassword',
      placeholder: 'Confirm your password',
    },
    {
      type: FieldType.Checkbox,
      title: 'I agree to the terms and conditions',
      name: 'terms',
    },
    {
      type: FieldType.Button,
      title: 'Sign Up',
      name: 'signup',
    },
  ];

  return <One fields={fields} />;
};

export default SignUpForm;
```

This is a simple sign-up form with fields for username, email, password, confirm password, and a checkbox for terms and conditions. Please modify it according to your needs. Remember to implement the necessary validation and submission logic.

Please note that the `FieldType` might vary based on the actual implementation of the `react-declarative` library. The above code is just a basic example. You might need to adjust it according to the actual API of the `react-declarative` library<sup>1</sup>.

Thank you! Can you also add a field for the user's full name?

How do I handle form submission in React?

What other components are available in react-declarative?
